WHAT WE DO

@GLV.MARKETING

We do six things. We do them in one place.

Most small businesses patch together three or four vendors to cover their marketing. GLV handles it all with one strategy behind it.

We get you found when people search.

Search engine optimization drives compounding traffic. We focus on Google Business Profile for local businesses and on-page SEO for service-area reach. This is where most of our clients see their biggest return.

Your website should work as hard as you do.

We design and build on WordPress and Vite. Clean structure, fast load times, built around the search terms your customers actually use. A site that looks good, loads fast, and converts.

Your email list is the one thing you actually own.

We set up and run email marketing for clients who want to stay in front of their customers between seasons.

Newsletters, automations, and reactivation campaigns that bring people back.

Ads that pay for themselves.

Meta and Google ads for businesses ready to accelerate. We build the campaigns, write the copy, and optimize based on what the data shows. We don't touch ad spend until the foundation is solid.

Want AI working inside your business?

We set up Claude Code and AI workflows for small and mid-size businesses. If you've been curious about AI but don't know where to start, we show you how to use it for real work, not just demos.

AI that never leaves your building.

For businesses in law, medicine, finance, or construction, cloud AI is a compliance risk. We deploy local AI systems that keep your data on your server. Built for Canadian regulated industries, PIPEDA-ready from day one.

We work with businesses that have something to protect.

Marine dealers, contractors, healthcare practices, financial services. If you're in a local or regulated industry and want marketing that compounds, send us a message.
